Subject: Re: Request for Final Review and Suggestions on Draft Syllabus – Economics

==== Forwarded message =====

Dear Dr Deepak Kumar Pandey,

Greetings!

Please find below a couple of my observations. It is up to the Drafting Committee and you to decide whether to accept and incorporate the changes or ignore for the time being. The courses look much better now and it is a reflection of the dedication of all the faculty involved in teaching Economics.

My observations are made with reference to the page numbers of the file named "2.Final Draft of Economics Syllabus".

1. Page 14/15: Use of integration can be limited at this stage. Particularly for Sections III and IV. Differential calculus is good enough for basic micro.
2. Page 18: mathematical application: calculation of GDP and all..actually, it is conceptual and simple arithmetic is required. No sophisticated mathematical techniques are required at this basic level. May be in input-output model but not in GDP estimation and its various forms.
3. Page 18: add circular flow of income and concepts of closed and open economy in Section I
4. Page 29: you may add the concept of money multiplier and concepts of Repo rate and CRR. They have relevance in the present context in the any economy and more so in the Indian Economy (repo and CRR).
5. Page 32: Ricardo (spelling in Reading list). M. Blaug is a good book for considering as a part of Essential Readings.
6. Page 37: You may add Fiscal and monetary policy (Mundell and Flemming Model), Marshall-Lerner Condition. These have contemporary relevance to understand the macro dynamics of the Indian economy.
7. Page 54: Theories of pricing (mark up and all) may be added. This is crucial and it has practical applications for the entrepreneur and industry.
8. Page 57: Debt sustainability and Domar condition. (again, relevant for us).
9. page 58: Section I should begin with Induction and Deduction..a discussion on these concepts is a must and relate it with the statistical techniques we use.
- 10: page 61: please make sure that constrained optimization is there in the syllabus. mainstream Eco may actually be defined in this manner.
- 11: page 72: I have a feeling that labour market theories are getting neglected. Again, it is important to understand critically whats happening in the Indian economy.

I am copying this mail to all for them to take a call too in view of time constraint.

Thanks and with regards,

Saumen Chattopadhyay

Dear Sir/Madam,

Greetings!

The Department of Higher Education extends its sincere appreciation for your continued support and valuable contributions in the process of curriculum reform aligned with the National Education Policy (NEP) mandate. Our goal is to develop a syllabus that not only builds a strong theoretical foundation in Economics but also equips students with the analytical and applied skills needed to thrive in today's dynamic and data-driven economy.

We are pleased to share the *Final Draft Syllabus* for **Economics**, as submitted by the Subject Convener of the University. The revised syllabus is designed to provide students with a well-rounded understanding of micro and macroeconomic theory, quantitative methods, development economics, public finance, and international trade. It also places a strong emphasis on practical skills relevant to careers in policy analysis, economic research, financial services, academia, development sectors, and entrepreneurship. Before finalizing the document, we kindly request your expert review, comments, and suggestions—if possible—by **20th May**.

Your insights will be instrumental in shaping a curriculum that is academically sound, professionally relevant, and future-ready.

We greatly value your expertise and look forward to your continued cooperation.

With warm regards,
